# How CheckCAFE works

**CheckCAFE** is a training program for established commercial nurseries that produce arabica coffee of DNA-verifiable varieties and have a production of at least 100,000 plants per year. The program seeks to promote compliance with good agricultural practices and genetic traceability.

Nursery applies to the program

Identification of sites and varieties

Agreement established between nursery and WCR

Initial diagnosis and action plan

Second diagnosis

Final diagnosis and sample collection

Genetic evaluation

Corrective measures implemented

Genetic evaluation confirming >90% conformity

Nursery receives certificate

## Production cycle 2023–2024

**CheckCAFE** is an activity implemented exclusively within the scope of the MOCCA program, therefore it will be active as long as MOCCA is active in Guatemala, El Salvador, Honduras, Nicaragua and Peru.

CheckCAFE seeks to promote compliance with Good Agricultural Practices and Genetic Traceability, so that nurseries participating in the process can strengthen their internal management processes and differentiate themselves in the market, as well as guarantee the phytosanitary and genetic quality of their plants to their customers.

These nurseries began their process in November 2023 and end their process with the closing of their production cycle in 2024.

Country	Name of nursery	Point of contact	Location of farm	Participating varieties	Email	Phone	Verified varieties	Diagnostic status*

\*There are 4 stages in the diagnostic process, including:

- **Diagnosed:** The nursery has been evaluated according to CheckCAFE checklist requirements based on GAP (Good Agricultural Practices).
- **In Process:** The nursery is implementing the requirements of CheckCAFE program based on GAP and traceability.
- **Awaiting Results:** The nursery completed the three evaluations and the leaf samples were collected for DNA analysis.
- **Program completed:** The nursery met requirements of CheckCAFE program based on GAP and genetic purity.
